problems of scale have exercised the minds of ecologists for many years and will continue to do so into the future this volume deals with this subject and with mathematical approaches to improve our understanding of complex ecological systems the book also concentrates on monitoring the responses of ecosystems especially to human impacts upon them the importance of spatial separation of function at both the landscape and ecosystem level forms an important theme finally this special book focuses on large scale issues discussing in particular important applied ecological problems and how these can be managed through a variety of planning processes many examples of major ecological problems in the mainstream ecological literature are drawn from europe and north america in contrast many of the most pressing ecological problems are to be found elsewhere in the world this volume is composed of four parts according to scale objectives and application of modern ecological research part i covers emerging concepts and models in the ecosystem complex and in the landscape part ii biological responses to environmental changes pattern and process part iii ecological networking and restoration technology theory and practice and finally a summary of 8th intecol congress and possible future directions are covered in part iv

for many animals behavioural adjustments represent the first response to human modified conditions by improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change behavioural responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have never experienced before clearly behaviour matters but how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes behavioural responses to a changing world challenges and applications a companion volume to the first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions to redress this the current book builds upon the foundations of the

original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world
